

PARAMECIA

Let's take a break from the microscopes today. We just got done looking at the **ELODEA** leaf and we were able to discover **cytoplasm** moving. This is called **cytoplasmic streaming**. We were also able to see the **cell wall** of each individual cell. In the **ELODEA** leaf, **chloroplasts** were visible and in the onion cell we were able to view the **nucleus**.

We have started to investigate single-celled organisms. Before we go any further, let's do a little researching. You will be creating a simple poster as you learn more about the **paramecia**.

With our Netbooks...do some searching for information on the **PARAMECIA**. With the information you find, create a poster that includes the following:

1. Title and your names 2pts.
2. Diagram with at least 5 parts to a paramecia 5 pts.
3. At least 5 interesting facts about the paramecia 5 pts.
4. Be creative and neat 3 pts.
